# Forthway for schools

Service and data summary | School purchase review

## One student workflow, connected to counselor follow-up

Students organize profiles and preferences, saved colleges, goals, counselor-assigned tasks and planning dates. Counselors review approved students at their school, identify follow-up needs, assign tasks and keep notes. Only notes deliberately shared with a student are visible to that student.

## What is included in the core workflow

College discovery and preference matching; saved college lists; grade/semester planning; personal and counselor tasks; progress and deadline views; counselor roster and attention indicators. List categories organize research and do not represent calculated admission probabilities. The product supports counselor judgment and makes no admissions-outcome guarantee.

## College information

The directory includes more than 6,000 federally listed U.S. institutions. Reporting years, campus coverage and field availability vary. Aggregate admissions histories, score ranges and residency breakdowns appear where sourced. Charts describe reported groups, not a student's chance of admission. No applicant-level accepted/rejected scattergrams are included. Students must check current requirements and official deadlines with colleges.

## School purchase and access

Schools receive a custom annual quote with agreed student/staff seats and service dates. Contact alexiewebbb@gmail.com with your school name, type, approximate seats and preferred start date. A verified school agreement and payment or approved purchase-order arrangement precede activation. Covered students use their invited school email without a card or individual charge. Personal accounts and their progress remain separate.

## AI scope is agreed separately

Lovable AI is the approved connection. AI access is enabled only for a reviewed school whose order states the delivered service, usage allowance and end date. Current controls limit one attempt per student per UTC day and five attempts shared across all schools and personal accounts per day, subject to the remaining one-time allowance. Failed/uncertain attempts count. These controls do not constitute a funded annual service promise. No unlimited AI is offered; capacity must be agreed before AI is sold.

# School data and operations

## Operator and contacts

Forthway is operated by Alexandra Webb, a sole proprietor based in Miami, Florida. Support and privacy contact: alexiewebbb@gmail.com. The forthway.llc domain is a brand address and does not indicate that an LLC has been formed. This is a service summary, not a signed order or a certification of business filings.

## School direction and records

The school confirms its contracting authority, approved users, educational purpose, applicable disclosure basis and required notices before sharing student records. The agreed user scope is U.S. students age 14 or older. Age eligibility does not itself authorize release of education records. School-specific retention, export and removal instructions belong in the order/data agreement.

## Providers and permitted use

Lovable provides application hosting, authentication and database infrastructure through its underlying providers. Lovable AI processes bounded guidance requests where enabled. Stripe handles payments and should not receive student planning records. Provider terms and roles must be included in the school data agreement. Forthway does not sell student records or use them for advertising profiles or unrelated commercial purposes.

## Requests, backups and recovery

Verified requests are reviewed for identity, school authority and scope before disclosure or removal. Active-record deletion is separate from provider residuals. Lovable reports daily full-database backups retained approximately fourteen days; storage files are separate. Logs have no guaranteed retention window or selective account-entry removal. A restore can reintroduce deleted records; access must stay closed until recorded removals are reconciled. No instant erasure of every copy is promised.

## Before students begin

Confirm the signed order/data agreement, seats, dates, school contacts, payment arrangement, actual AI capacity if included, and approved invitations. Support/privacy coverage is reviewed each business day. A school walkthrough can precede these activation steps; this summary does not itself activate accounts or accept an order.
